Passionate web developer with 4 years of experience. Eager to join a company to start working with a competent team as passionate as me to design and develop as best as we can, and also to solve any problem that comes our way. As a freelancer, I helped people around the world to redesign his website and fix small design or code mistakes remotely. Also as personal projects to train I built multiple websites from scratch with responsive design and clean code and took different courses to improve my design and coding skills to not just stick to what I’ve learned during studies & master technologies as best as I could.

Im looking to join a company to keep building new things with a team and start new projects & also improve my coding & logical skills.

PROJECTS DURING MY JOURNEY

Manifesto

In my current role, I've developed and maintained various internal tools and client-facing applications. These projects span different domains, including data analytics, customer loyalty systems, and automated content generation. My responsibilities included full-stack development, project management (using Laravel Forge and DigitalOcean), and occasional work with Salesforce (for newsletter management) and Google Analytics/Tag Manager.

Most of these projects are proprietary and not publicly accessible, but here are some highlights of my contributions:

Data Analytics Platform

- *Developed a big data comparison tool that allowed users to analyze and visualize social media metrics across multiple companies.*
- *Built interactive charts and dashboards for comparing engagement, reach, and other KPIs.*
- *Tech stack: Vue, Inertia, Laravel, Tailwind (VILT), with a dual-database architecture (one for user management, another for large-scale analytics).*

Loyalty & Rewards System

- *Contributed to a points-based rewards platform where businesses could track performance against objectives and redeem incentives.*
- *Enhanced functionality for bulk data imports (Excel/CSV) and automated point calculations.*
- *Tech stack: Vue, Inertia, Laravel, Tailwind (VILT).*

Automated Content Generator

- *Built a web tool integrating OpenAI's API to dynamically generate customized out-of-office messages based on user prompts.*

Internal Collaboration Platform

- *Developed an internal team management system for creating, reviewing, and selecting project proposals.*
- *Implemented role-based permissions (admin vs. user levels) and dashboards for tracking submissions.*

Additionally, I contributed to the company's public website (using Twill CMS) and various landing pages, along with supporting other team projects as needed.

Vilax

- *Managed more than 15-20 company websites using Wordpress + Elementor. Also fixed Wordpress plugins specifically.*

Freelancing at Upwork

- *Solved bugs or improved Laravel/PHP websites for clients aswell as building new features or updating/fixing them.*
