

Ignacio Amat Urbina

Barcelona, Spain · github.com/ignaaaam · ignasiamat10@gmail.com

Full Stack Developer with 4 years of experience building robust and scalable web solutions for corporate clients. Specialized in the PHP/JavaScript ecosystem, mastering technologies such as Laravel, Vue, Livewire, and TailwindCSS. I have managed the complete development cycle, from backend architecture to modern interfaces, implementing best practices and clean code. Seeking to join teams where I can contribute my ability to solve complex technical problems while actively contributing to the product's growth and success.

PROFESSIONAL EXPERIENCE

Freelance

Barcelona, Spain
2024 - Present

Full Stack Web Developer

- Freelancing with various personal projects and also working for clients that need freelancing work on new projects, bug fixing and new implementations on existing projects. Looking to work with new clients on new projects to learn new things, improve existing tech stacks and improve overall on full stack development, but this time also making my own products & projects.

Manifiesto

Barcelona, Spain
2022 - 2025

Full Stack Web Developer

- Developed Full Stack websites as a developer for high-level companies including Banco Santander, Telefonica, Vueling, Repsol, Acciona, Sofima, ElPozo, Bimbo, Taco Bell, Gimos, Citroen, and more.
- Built websites using HTML, Laravel, NextJS, Vue, Livewire, MySQL, and TailwindCSS, managing all these projects using GIT, Laravel Forge, and DigitalOcean.
- Also responsible for maintaining projects up-to-date and current, keeping control of package versions, as well as upgrading legacy projects (for example, updating projects from older Laravel versions to the newest versions along with their corresponding libraries and packages, and also on the frontend side, upgrading projects from Vue 2 to Vue 3).

Vilax

Viladecans, Barcelona, Spain
2021 - 2022

Full Stack Web Developer

- Managed over 50 corporate & product websites primarily using WordPress and Elementor.
- Developed email marketing tasks and configured (and improved/fixed through PHP) plugins to interact with WordPress and WooCommerce files.
- Installed and configured new WordPress sites, SSL configurations, and fixed all kinds of issues related to these technologies, web deployment and maintenance.

Freelance

Barcelona, Spain
2019 - 2021

Full Stack Web Developer

- Solved tasks for individuals and private companies. These tasks involved using technologies such as Laravel, PHP, JavaScript, as well as creating websites, fixing/improving implementations and adding new sites, designs, sections, and refactoring code that might be obsolete.

FEATURED PROJECTS

Data Analysis Platform

Developed a data analysis platform that cross-referenced information from all social networks with a large amount of data (from databases), displaying analysis and graphs based on all the data collected from each social network (different companies/clients had data from different social networks) and also classifying by accounts from those social networks, cross-referencing the data and showing statistics and analytics as well as post analysis (depending on the social network). Includes user analysis, KPI analysis, interactive charts, and dashboards. Tech stack: Vue, Inertia, Laravel, TailwindCSS.

Points and Rewards System

Created a complete points system where users can earn points for performance against objectives and redeem inventory. Enhanced functionality for data reports and inventory analysis. Tech stack: Vue, Inertia, Laravel, TailwindCSS.

Automated Content Generator

Developed an automated content generator that uses OpenAI to generate personalized messages based on user preferences.
