**MUSIC**

**DESIGN**

**SPORTS**

---

Passionate web developer with 4 years of experience. Eager to join a company to start working with a competent team as passionate as me to design and develop as best as we can, and also to solve any problem that comes our way. As a freelancer I helped people around the world to re-design his website and fix small design or code mistakes remotely. Also as personal projects to train I built multiple websites from scratch with responsive design & clean code and took different courses to improve my design and coding skills to not just stick what I've learnt during studies & master technologies as best as I could.

Im looking to join a company keep building new things with a team and start new projects & also improve my coding & logical skills.

## EXPERIENCE

**actual 2022**
(Barcelona, Spain)

### FULL STACK WEB DEVELOPER at MANIFIESTO
- Working as a full stack web developer for top high level companies from Spain such as Btravel, Playstation, Glovo, TikTok, LaCaixa, Sofinco, ElPozo, Bizum, TacoBell, Ginos, Citroen and more....
- Building websites & web apps using PHP, Laravel, Inertia, Vue, Livewire, MySQL & TailwindCSS, managing all this projects using GIT, Laravel Forge & DigitalOcean.

**2021 2022**
(Viladecans, Spain)

### FULL STACK WEB DEVELOPER at VILAX (internship)
- Managed more than 10+ companies websites & hostings, mostly Wordpress + Elementor + Woocommerce stack & developed some plugins to interact with Wordpress & Woocommerce core files. Also did small tasks on all those websites such as changing hostings, setting up new Wordpress installations, SSL configurations and fixing all type of issues related to those technologies.

**2020 2019**
(worldwide)

### FREELANCE WEB DEVELOPER
- Solved tasks for particular people or companies, those tasks involved fixing mistakes on a existing website, fixing bad implemented code and added new sites, designs, sections and re-writed code that could have been improved.

**Advanced CSS and Sass: Flexbox, Grid, Animations and More!**
Udemy, Jonas Schmedtmann

**2018**
**Build Responsive Real-World Websites with HTML and CSS**
Udemy, Jonas Schmedtmann

## Manifiesto

*Where i'm at right now, I built mostly internal projects for the company, that are used by us, or sold to some clients. Also did projects for clients aswell as managing Newsletter using Salesforce for 'La Caixa', managing all the projects using Laravel Forge & DigitalOcean aswell as Google Analytics/Google Tag Manager sometimes. All this projects are internals and cannot be visited because are specific made for clients but I'll attach some news to it.*

(During all this projects they were also stopped some times to help on other projects that the team needed help with)

- **DATAHUB:** was a comparison tool between a lot of data (big data SQL database) we took about social media of companies. With all this data you could create charts, compare charts between companies for every social media you selected (Instagram, Youtube, Twitter, Linkedin). You could select for example Banc Sabadell, La caixa, ING and compare the metrics of engagement, reach... (all this social media calculations) per social media. This project was done using the VILT stack (Vue, Inertia, Laravel, Tailwind). I used PHP + Laravel in the Backend to build the charts, Inertia to pass the data into Laravel and Vue, Tailwind for the frontend). This project used 2 Databases, one for our users/settings and more, and another one for the big data of companies.

  (https://www.programaticaly.com/colaboradores/viaje-datos-pais-creativos-manifiesto)

- **SIKALOYALTY:** this one wasn't built for me entirely but I helped with some new releases, it's a points rewarding system for companies where they can import company facturation from excel. Once facturation is  imported, this company wins points based on objectives previously set about per year facturation or per month facturation. Then once you upload facturation you get points. You can then change those points for rewards. This was also made with VILT stack.

  (This was an internal tool for https://esp.sika.com/ )

- **OutOfOffice for Btravel:** made a web using OpenAI API, where people would use a prompt to generate an out of office message

  (https://www.elpublicista.es/anunciantes/b-travel-genera-ansiado-out-of-office-traves-chatgpt)

- **Shakers:** This project is an internal project for our team, you can create Briefs (this is "the seed from which an ad campaign grows) and Teams, each team can present a case and administrators can select finalists/winners of teams. Administrators have a dashboard of briefs and can create/edit/delete/archive briefs, aswell as manage teams. Users can create the teams and there's users that are owners of that team. So there's permissions depending if you're admin or user.

There are more projects, like the company website which uses Twill (Laravel CMS) and landing pages and a lot more. But I think those mentioned above are the most important and the ones that taught me the most.

## Vilax

- Managed more than 15-20 company websites using Wordpress + Elementor. Also fixed Wordpress plugins specifically.

## Freelancing at Upwork

- Solved bugs or improved Laravel/PHP websites for clients aswell as building new features or updating/fixing them.
